

## **Experiment Name: MenuBar Application with Shared Preference**

### **106118106 V Venkataraman CSE B**

**Date:** 25-03-2021

#### **Aim:**

To create a mobile application that has a Menu List to open another app, take selfie, do system control or exit the application. Also must have 3 textboxes whose data is stored and loaded using shared preferences.

#### **Description of App:**

Initially the user enters Name, Email and Phone number in EditText fields. When he presses 'Store', it gets saved using Shared Preference and when he presses 'Load ' previously stored information gets loaded on screen.

The Menu Bar has 4 items: When 'MyApp' is pressed get redirected to Fragment App. When Selfie is pressed opens camera front facing mode. When Status bar is pressed enters or exits full screen mode. When Brightness is pressed increases or decreases device brightness. When ringtone is pressed, user can choose preferred ringtone from list. When theme is pressed alternates between Light and Dark theme.

#### **Device Specifications:**

App runs on the minSDK version of 16 and Android version 11 using Pixel 3A API emulator and samsung device. Only default libraries were used.

#### **Technical Concepts Learnt:**

I have used Linear layout vertical orientation, Edit Text, Text View, Buttons, Shared Preferences, onClick Listener, Menu Items, Intent for activity, implicit and explicit intents, Changing System settings, WindowManager and RingTone Manager

#### **SOURCE CODE:**

##### **MainActivity.java:**

```
