

Experiment Name: Intent Application with Content

106118106 V Venkataraman CSE B

Date: 11-03-2021

Aim:

To create a mobile application that can send a mail (Gmail app), open the camera and shoot a video(Default camera app) and take notes and save in a note taking app (OneNote app).

Description of App:

We create 3 radio buttons to choose the functionality we want to use. When Submit button pressed, based on user choice one of 3 intents get fired. For mail, we use the Gmail app and for the camera we use the built in application. For notes we are using a third party application.

Device Specifications:

App runs on the minSDK version of 16 and Android version 11 using Pixel 3A API emulator and samsung device. Only default libraries were used.

Technical Concepts Learnt:

I have used Linear layout vertical orientation, Edit Text, Text View, Radio buttons, Button, Implicit Intents and exception handling and Toasts

SOURCE CODE:

MainActivity.java

```
package com.example.redirect_app;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.net.Uri;
import android.os.Bundle;
import android.provider.MediaStore;
import android.view.View;
import android.widget.RadioGroup;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {
    RadioGroup radio;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
```

```

super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);

radio = (RadioGroup) findViewById(R.id.radio);
findViewById(R.id.submit).setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View v) {
        int id = radio.getCheckedRadioButtonId();

        if(id==R.id.mail) {
            Intent intent = new Intent(MainActivity.this,
MailActivity.class);
            startActivity(intent);
        }
        else if(id==R.id.camera) {
            Intent intent = new Intent(MainActivity.this,
CameraActivity.class);
            startActivity(intent);
        }
        else {
            Intent intent = new Intent(MainActivity.this,
NoteActivity.class);
            startActivity(intent);
        }
    }
});
}
}

```

Activity_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
